PROJECT

FORMULATION AND EVALUATION OF SOLID LIPID NANOPARTICLES OF QUETIAPINE FUMARATE

Summary: The purpose of the study was to formulate and evaluate solid lipid nanoparticles of Quetiapine Fumarate which is BCS II drug with poor oral bioavailability of 9% due to first pass metabolism. To overcome these problems an attempt was made to prepare Quetiapine Fumarate into Solid lipid nanoparticles which has ability to improve solubility and the oral bioavailability. Solid lipid nanoparticles of Quetiapine Fumarate were prepared by hot homogenization method and quenching method using Cutina HR as a carrier. Prepared SLNs were subjected for various evaluation tests.
