

CLASSIFICATION OF INTERCELLULAR COMMUNICATION

Intercellular signaling is subdivided into the following classifications:

✓ **Autocrine** signals target the cell itself. Sometimes autocrine cells can target cells close by if they are the same type of cell as the emitting cell. An example of this are autocrine cells.

target cells in the vicinity of the emitting cell. neurotransmitters

target distant cells. Endocrine cells produce hormones that travel through the blood to reach all parts of the body.

target adjacent (touching) cells. These signals are transmitted via protein or lipid components integral to the membrane and are either the emitting cell or cells immediately adjacent.
